FedMedDx — Dataset & Modality Reference Guide

1. Chest X-Ray (CXR)

- **Description:** Multi-class pulmonary infection and lung abnormality detection from digital chest X-ray scans (COVID-19, Viral Pneumonia, Lung Opacity, Normal).
- **Dataset Link:** [COVID-19 Radiography Database on Kaggle](#)

2. Skin Lesion

- **Description:** Multi-class skin lesion diagnosis across 7 benign and malignant conditions, including melanoma and basal cell carcinoma.
- **Dataset Link:** [HAM10000 Skin Cancer Dataset on Kaggle](#)

3. Brain MRI

- **Description:** Multi-class brain tumor identification and classification covering glioma, meningioma, pituitary tumors, and non-tumor tissue.
- **Dataset Link:** [Brain Tumor MRI Dataset on Kaggle](#)

4. Retinal Fundus

- **Description:** 5-grade Diabetic Retinopathy severity classification from high-resolution color fundus photography.
- **Dataset Link:** [APTOS 2019 Blindness Detection Competition on Kaggle](#) (*Note: Accept competition rules on the page before downloading*)
